

# Engineering Training in Biotechnology

In Bordeaux, the city where you have to be

A graduate school that adapts and evolves, inspired by its privileged partnerships

The ENSTBB, National School of Biomolecule Technology of Bordeaux, is one of the 7 public engineering schools of Bordeaux INP.

The school trains engineers specializing in biotechnology, synthetic biology and more particularly in the production, purification and characterization of proteins.

This training makes it possible to meet the needs of the industrial sectors of biotechnology, pharmacy, cosmetics and green chemistry.

Since its creation, this public school has affirmed its national and international influence through an ambitious training policy founded, on the one hand, on the acquisition of specific skills related to biotechnology and, on the other hand, on transversal skills specific to the engineering functions.

Direct backing for research of excellence is an essential component of this approach. Its training policy is also part of strong partnerships with the business world.

- Internships in all 3 years of study
- Consistent partnership network
- *Grande Ecole* management partnership
- High-level teaching by academics and Biopharm companies
- Alumni around the world
